

How to select a regexp group in vim?

having this line:

```
bla bla bla [Corso De Stefanis 88 interno 4](address) blabla
```

search and highlight this string in square brackets.

```
Corso De Stefanis 88 interno 4
```

this is solution:

```
/\[zs.\{-}\ze\]
```

In a sense, capture group seems not working, but you can select the "group" preceding sequence by `\zs` and finishing with `\ze`. vim regexp syntax is weird for me.
